TECHNOLOGY TRANSFER

Number and Characteristics of Inventions Licensed by Six Federal Agencies

**Resources, Community, and
Economic Development Division**

B-281432

June 18, 1999

The Honorable Duncan L. Hunter
House of Representatives

Dear Mr. Hunter:

The federal government, a major sponsor of research and development, provided about \$70 billion in funding for this purpose in fiscal year 1998. Federal funds are used to support both “intramural” programs that involve government employees working in government facilities and “extramural” programs that are carried out by nonfederal organizations through contracts and grants.¹ In some cases, federally sponsored research leads to the creation of new products and processes that can be patented and commercialized. Generally, when a federal employee creates an invention within the scope of his or her employment, the applicable agency retains title, may license the invention to third parties, and may receive royalties under the license. When a contractor or grantee creates the invention, however, the contractor or grantee generally is allowed to take title to, license, and receive royalties on the invention.

You requested that we provide statistical information on the licensing of government-owned inventions created under federally funded research projects. This report provides information on (1) government-owned inventions licensed by six federal agencies during fiscal years 1996 through 1998, including the royalties received during that period, and the total number of active licenses these agencies had as of October 1, 1998; (2) whether the licenses were exclusive or nonexclusive; (3) whether the licensees were small businesses, individuals, large businesses, or nonprofit organizations; and (4) whether the licensees were foreign or domestic.

Generally, an “exclusive license” conveys the right to make, use, or sell the invention to only one licensee, while a “nonexclusive license” can convey all or a portion of these rights to multiple licensees. A “small business” is a for-profit entity with 500 or fewer employees; a “large business” is a for-profit entity with more than 500 employees; and a “nonprofit” is any other organization. A “domestic” licensee is one incorporated or headquartered in the United States, while all other licensees are considered “foreign.” The six agencies are the National Institutes of Health, within the Department of Health and Human Services;

¹Some agencies, such as the Department of Energy, use contractors to operate federally owned facilities. This report concerns only government-owned inventions and thus does not include any statistics for contractor-owned inventions created in federally owned laboratories.

the departments of the Army, the Navy, and the Air Force; the Department of Energy; and the National Aeronautics and Space Administration.

Results in Brief

The six agencies reported that they granted a total of 866 licenses and received \$107.5 million in royalties during fiscal years 1996 through 1998. As shown in figure 1, most of the licenses were nonexclusive, most went to small businesses or individuals, and most went to domestic entities.

Figure 1: Characteristics of Licenses and Licensees

Source: GAO's presentation of data from the National Institutes of Health (NIH); the departments of the Army, the Navy, and the Air Force (USAF); the Department of Energy (DOE); and the National Aeronautics and Space Administration (NASA).

As of October 1, 1998, the six agencies had a total of 1,391 active licenses. The license types, licensee types, and licensee locations occurred in

proportions similar to those licenses granted during fiscal years 1996 through 1998.

Background

For multiple and diverse reasons, the U.S. government encourages the licensing and commercialization of inventions created under federally sponsored research. These reasons include assisting small businesses, promoting collaboration between commercial enterprises and nonprofit organizations, and encouraging the use of new technology by U.S. industry and labor. Under 35 U.S.C. 207, federal agencies are authorized to apply for patents and to grant licenses for federally owned patent applications and patents.

There is no comprehensive national database on the licensing of federally funded inventions. Recording licenses to third parties is permitted at the Patent and Trademark Office, within the Department of Commerce, but is not required for either the public or government patent holders. When licenses are submitted for recording, they are included in an “assignment” database that primarily provides a record of patent ownership. However, according to Patent and Trademark Office officials, few licenses are recorded at their office for inclusion in this database. The Government Register, established by executive order in 1944, is a subset of the assignment database and is the official record of all rights and interests of the U.S. government in and under patents. The Government Register is not used to record licenses to third parties.

Data concerning agency licensing is also published by the Department of Commerce as part of its biennial reporting of agencies’ implementation of the Stevenson-Wydler Technology Innovation Act and related legislation.²

Annual Licenses Granted Have Remained Constant, but Royalties Have Increased

The number of new licenses granted annually by the six federal agencies remained relatively constant for the 3 fiscal years, with 279 in fiscal year 1996, 292 in fiscal year 1997, and 295 in fiscal year 1998. As shown in figure 2, royalty revenues increased from \$28.3 million in fiscal year 1996 to \$41.9 million in fiscal year 1998, an increase of 48.1 percent (see app. I).

²Under the Stevenson-Wydler Technology Innovation Act of 1980, as amended, it is the policy of the federal government, where appropriate, to transfer federally owned or originated technology to state and local governments and to the private sector (15 U.S.C. 3710(a)). As part of its responsibility under this act, the Secretary of Commerce is required to submit biennial reports to the President and the Congress on agencies’ use of the act’s authorities (15 U.S.C. 3710(g)(2)).

Figure 2: Royalties Received by Six Federal Agencies, Fiscal Years 1996 Through 1998

Source: GAO's presentation of data from NIH, the Army, the Navy, the USAF, DOE, and NASA.

As shown in figure 3, NIH was by far the largest licensor among the six agencies, accounting for 607, or 70.1 percent, of the total licenses granted over the 3 fiscal years. NIH also had the majority of active licenses, with 990, or 71.1 percent, of the 1,391 licenses active as of October 1, 1998.

Figure 3: Licenses Granted by Six Federal Agencies, Fiscal Years 1996 Through 1998 and Active as of October 1, 1998

Source: GAO's presentation of data from the agencies cited.

As shown in table 1, NIH also had the largest share of total royalty payments received during fiscal years 1996 through 1998, accounting for \$102.2 million, or 95.1 percent, of the \$107.5 million received by the six agencies.

Table 1: Royalties Received by Six Federal Agencies, Fiscal Years 1996 Through 1998

Agency	Royalties received	Percentage of total royalties
NIH	\$102,200,000	95.1
The Army	1,030,537	1.0
The Navy	1,765,006	1.6
The USAF	560,000	0.5
DOE	435,175	0.4
NASA	1,470,280	1.4
Total	\$107,460,998	100

Source: GAO's presentation of data from the agencies cited.

Most Licenses Were Nonexclusive

Most of the licenses reported by the six agencies were nonexclusive. Nonexclusive licenses accounted for 634, or 73.2 percent, of the licenses granted during fiscal years 1996 through 1998 and for 963, or 69.2 percent, of the licenses active as of October 1, 1998. As shown in figures 4 and 5, the individual agencies varied widely by the type of license granted. NIH reported that 514, or 84.7 percent, of its licenses granted during the 3 fiscal years and 769, or 77.7 percent, of its active licenses were nonexclusive. NIH granted more licenses than the other five agencies combined, and because of the amounts for NIH, the percentage of nonexclusive licenses for these five agencies was much smaller than for all six agencies combined. While DOE also had a high proportion of nonexclusive licenses, the other four agencies had far smaller proportions and, in some cases, had more exclusive than nonexclusive licenses (see apps. III and IV).

Figure 4: Types of Licenses Granted by Six Federal Agencies, Fiscal Years 1996 Through 1998

Source: GAO's presentation of data from the agencies cited.

Figure 5: Types of Licenses Granted by Six Federal Agencies, Active as of October 1, 1998

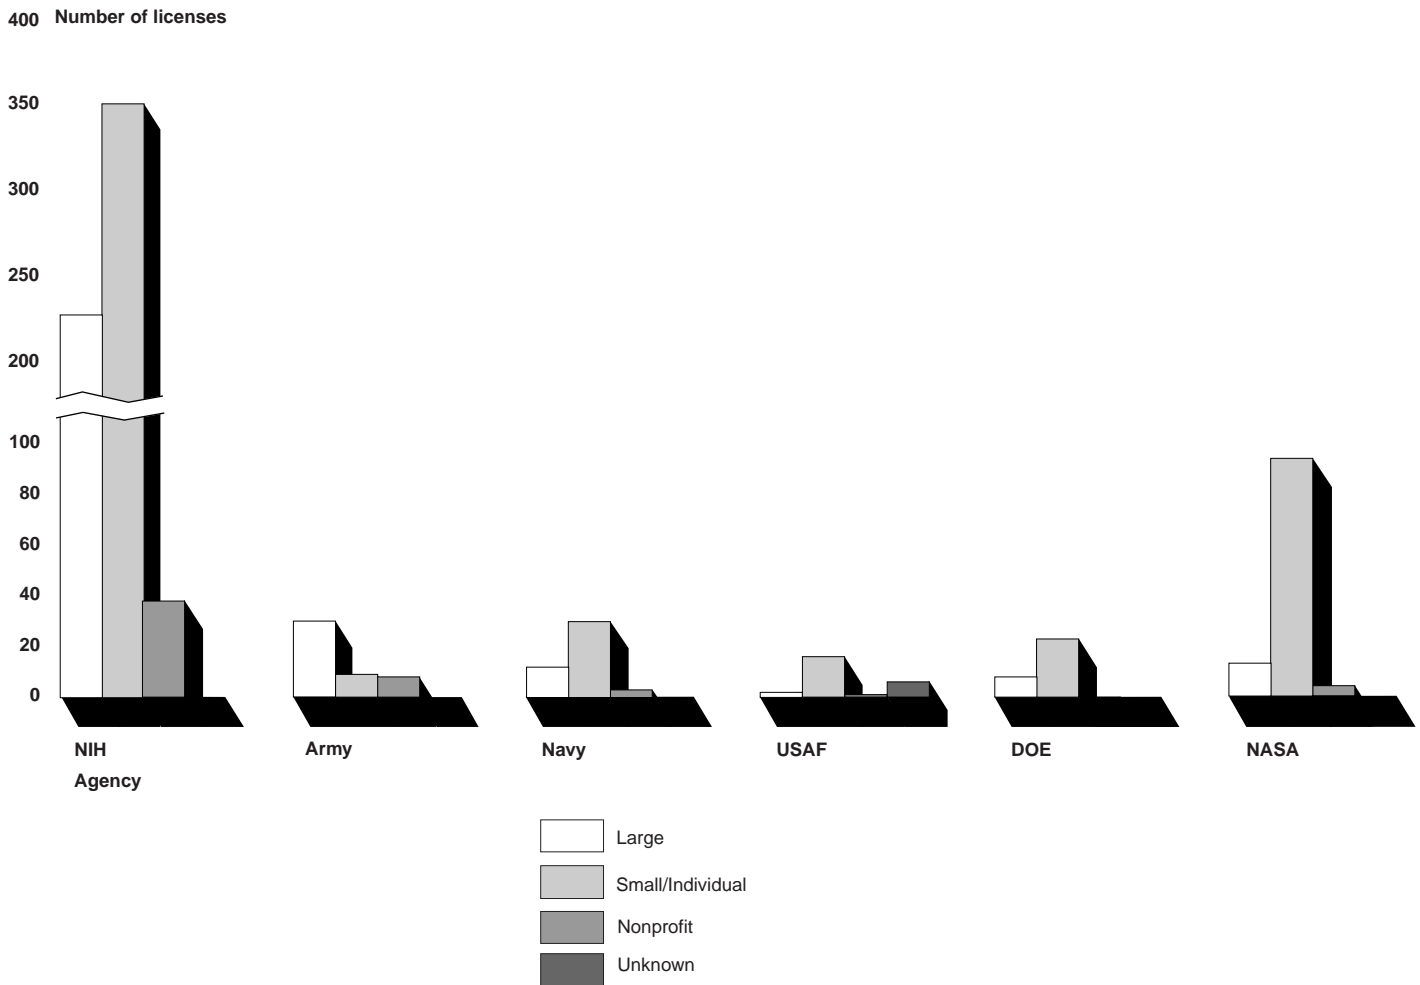

Source: GAO's presentation of data from the agencies cited.

Most Licensees Were Small Businesses and Individuals

Small businesses and individuals represented the largest segment of licensees for government-owned inventions. Small businesses and individuals accounted for 518, or 59.8 percent, of all licenses granted during fiscal years 1996 through 1998 and for 744, or 53.5 percent, of the licenses active as of October 1, 1998. Large businesses accounted for more than a third of licenses granted over the 3-year period as well as for active licenses. Nonprofit organizations accounted for only 54, or 6.2 percent, of the licenses granted during the 3 fiscal years and 40, or 2.9 percent, of the active licenses.

As shown in figures 6 and 7, the individual agencies were consistent in granting a majority of their licenses to small businesses and individuals. The only exception was the Army, which reported that small businesses and individuals accounted for 9, or 19.1 percent, of the licenses it granted in fiscal years 1996 through 1998 and for 20, or 21.5 percent, of active licenses (see apps. V and VI).

Figure 6: Licenses Granted by Six Federal Agencies, by Licensee Type and Agency, Fiscal Years 1996 Through 1998

Source: GAO's presentation of data from the agencies cited.

Figure 7: Licenses by Licensee Type and Agency, Active as of October 1, 1998

Source: GAO's presentation of data from the agencies cited.

Most Licensees Were Located in the United States

The majority of licenses went to domestic entities. Of the licenses granted in fiscal years 1996 through 1998, 767, or 88.6 percent, went to domestic entities, as did 1,177 or 84.6 percent of the licenses active as of October 1, 1998. Figures 8 and 9 show that the individual agencies generally were consistent in granting a majority of their licenses to domestic entities, with

all six agencies reporting at least 80 percent of their licenses as domestic. Most of the licenses that went to foreign entities had been granted by NIH (see apps. VII and VIII).

Agency Comments and Our Evaluation

We provided copies of a draft of this report to the National Aeronautics and Space Administration, the Department of Commerce, the Department of Energy, the Department of Defense, and the National Institutes of Health for review and comment. The National Aeronautics and Space Administration responded that it had no comments. Each of the other

agencies recommended various changes and clarifications to the report, and we made changes as appropriate.

The Department of Commerce suggested that we acknowledge, in our introduction, that there are government-owned facilities operated by contractors where the inventions are not government-owned, and, consequently, statistics on these inventions are not included in our report. We revised the report in response. Commerce also suggested that we explain that some of the agencies are parts of departments where there are also other agencies conducting research and that our report does not provide statistics on these other agencies. While we agree that these other agencies conduct research, we did not make changes in this regard because the report already explains that the statistics included were limited to the six specific agencies named and that the six agencies are among the largest in terms of research funding and patents. In addition, Commerce suggested that we add information to the background section of the report to provide a better characterization of certain databases maintained by the Patent and Trademark Office and to note that Commerce provides a biennial report on agency licensing. We added these clarifications.

The Department of Defense, commenting for the departments of the Army, the Navy, and the Air Force, suggested a number of changes, such as adding footnotes to some of the data in the appendixes and making some revisions to license categories. We made each of these as appropriate to the statistics presented in appendixes in XI through XVI.

The Department of Energy requested that we include a statement in the report to show that the Department receives much of its royalty income from inventions created in its laboratories by contractors, even though the inventions themselves are not government-owned. We added this information as a note to the statistics presented in appendixes XVII and XVIII.

The National Institutes of Health suggested that we restate our definition of “nonexclusive” licenses to note that these licenses can convey the same rights as “exclusive” licenses but to multiple licensees. We changed the definition as suggested.

Scope and Methodology

Because there is no comprehensive database on the licensing of government inventions, we obtained our statistics directly from selected

funding agencies. We asked for information from six agencies—the National Institutes of Health; the departments of the Army, the Navy, and the Air Force; the Department of Energy; and the National Aeronautics and Space Administration. We chose these six agencies because they were among the largest agencies in terms of funding for research and development during fiscal year 1998, accounting for about \$54 billion, or 77.4 percent, of the \$69.8 billion in funding for all federal agencies. Also, they were the six largest agencies in terms of patents granted by the Patent and Trademark Office to federal agencies during fiscal years 1988 through 1997 and, according to federal officials knowledgeable with technology transfer, among the largest in invention-licensing activities.

From each agency selected, we requested information for licenses granted during fiscal years 1996 through 1998 as well as for licenses in effect as of October 1, 1998. We asked the agencies to provide statistics regarding (1) license type, or whether the licenses were exclusive or nonexclusive; (2) licensee type, or whether the inventions were licensed to individuals/small businesses, large businesses, or nonprofit organizations; and (3) licensee location, or whether the licensees were foreign or domestic.

We asked the agencies to provide information for both government-owned inventions and federally supported inventions owned by federal contractors and grantees. However, the agencies generally did not collect or maintain information on licenses granted to third parties by contractors and grantees. Thus, the licensing statistics in this report are limited to government-owned inventions.

We did not validate or verify the data provided by the agencies. However, we contacted agency officials to discuss their programs and to obtain answers to any questions we had regarding the statistics they had provided. We conducted our work from September 1998 through May 1999 in accordance with generally accepted government auditing standards.

We will send copies of this report to the appropriate House and Senate committees; interested Members of Congress; the agencies discussed in this report; the Honorable Jacob J. Lew, Director, Office of Management and Budget; and other interested parties. We will make copies available to

others upon request. If you or your staff have any questions or need additional information, please call me at (202) 512-3841. Major contributors to this report are listed in appendix XXI.

Sincerely yours,

A handwritten signature in black ink, consisting of a series of fluid, connected strokes that form a stylized, cursive name.

Ordering Information

The first copy of each GAO report and testimony is free. Additional copies are \$2 each. Orders should be sent to the following address, accompanied by a check or money order made out to the Superintendent of Documents, when necessary. VISA and MasterCard credit cards are accepted, also. Orders for 100 or more copies to be mailed to a single address are discounted 25 percent.

Orders by mail:

U.S. General Accounting Office
P.O. Box 37050
Washington, DC 20013

or visit:

Room 1100
700 4th St. NW (corner of 4th and G Sts. NW)
U.S. General Accounting Office
Washington, DC

Orders may also be placed by calling (202) 512-6000 or by using fax number (202) 512-6061, or TDD (202) 512-2537.

Each day, GAO issues a list of newly available reports and testimony. To receive facsimile copies of the daily list or any list from the past 30 days, please call (202) 512-6000 using a touchtone phone. A recorded menu will provide information on how to obtain these lists.
